

WattsHappening v2.3 – Release notes

Target Release date: 12/05/2025

Release notes date: 15/05/2025

Overview

Changes:

- Simulation redesigned as full screen experience with improved user experience, stronger emphasis on conditions/disclaimer, and more detailed results
 - o Simplification, some questions taken away (due to minimal impact on results) e.g. start-up cost, cost of energy for assets other than production
 - o Detailed afrr and mfrr revenue results into up and down with additional values (e.g. avg energy remuneration, volumes)
 - o Avg daily cycle count value for storage assets
- Documentation updated to reflect corrections and bugfixes
- Revenue estimations for imbalance is now marked as zero for the few cases where it results in a negative value, as there is no incentive to participate in that case
- Updated disclaimer under the estimation tool on the home page

Bugfixes:

- Corrections made to simulation model:
 - o Production asset were accounting twice for the cost of energy in energy remuneration
 - o error in processing “calendar month” filter for availability, was overestimating results for some cases
 - o Solar and wind availability was underestimated for implicit flexibility (DA, ID, Imb)
